Electronic Arts

Dear Hiring Team,

This letter is to express my interest in the Electronic Arts Summer 2025 Game Design Intern role. I am a student currently attending Georgia Institute of Technology, pursuing a bachelor's degree in Computational Media with a concentration in People - Games. I'm excited to gain hands-on experience with game design and learn more about the intricacies of this field.

My interest in this opportunity is inspired by my love for playing video games and the individuals I connected with during my experience in the Girls Who Code program partnered with Electronic Arts in 2023. During the program, I was challenged to create a web game that integrated audio and visual aspects through raw code to create a unique storytelling game experience. Through this exposure, I obtained knowledge in Javascript (with a focus on the p5.js library) and an understanding of how aspects from a multitude of different disciplines come together to form an enjoyable (and memorable) gaming experience, thoroughly kindling my curiosity in the process of game design.

To continue this exploration of knowledge, I recently took a computing course at the Georgia Institute of Technology which developed my experience with more technical skills, such as coding in Python, Javascript, and API integration, while also participating in numerous labs focused on User Interface skills, such as coding in HTML and CSS. I've also practiced applying the skills learned in the course with personal projects, such as a Notion Theme Generator and a chatbot using Google's Language Learning Model, Gemini.

Essentially, I'm more than excited to learn more about the game design process, while also applying my knowledge and experience to the field of Game Design at Electronic Arts. I am sure that my interest and experience will provide me with a unique perspective to help grow EA's social sandbox game.

Thank you for your time and consideration. I look forward to discussing the opportunity further.

Sincerely,

Soncerá Adams
